

SCIENCE-DRIVEN NUTRITION

Innovating Nutrition. Empowering Dairy Performance.

Science-driven, customised dairy nutrition engineered for Indian conditions. Rumen-first formulations. Measurable results on the field.

SCROLL

WHO WE ARE

A Research Partner, *Not Just a Supplier.*

Shibha Customised Dairy Solutions India Pvt. Ltd. was founded on a single conviction: Indian dairy farms deserve nutrition science built for their reality — their roughage, their breeds, their climate, their economics.

We go beyond generic additives. Every solution begins with a deep farm audit, a precise feed analysis, and a formulation designed to maximise rumen efficiency, liver health, and total economic return per animal.

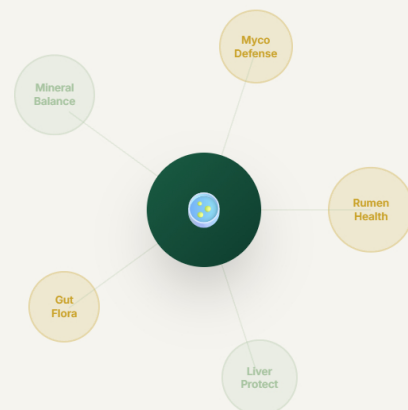

Rumen-First Philosophy

Every formulation begins with the rumen — optimising microbial ecology before the bloodstream.

Thermostable Technologies

Products engineered to withstand India's climatic extremes without loss of potency.

IN

Indian Feeding Systems

Formulated for Indian roughage, mixed rations, and regional breed physiology.

Customised Solutions

No off-the-shelf templates — every recommendation is farm-specific and performance-validated.

PRODUCT ECOSYSTEM

Complete Nutrition Architecture

Eight specialised categories — each precision-engineered for a specific physiological need in the dairy animal.

Rumen Functional Additives

Optimise microbial ecology for superior fibre digestion and VFA production.

Rumen Protected Nutrients

Bypass protection ensuring peak absorption of amino acids, fats, and vitamins.

Minerals & Vitamins

Precision chelated mineral complexes calibrated to Indian feed compositions.

Liver Health Solutions

Hepatoprotective formulations for high-producing cows under metabolic stress.

Mycotoxin Management

Multi-toxin binders designed for mycotoxin profiles prevalent in Indian feed.

Natural Performance Enhancers

Plant-based bioactives that improve feed efficiency and immune resilience.

Gut Health Solutions

Prebiotic and probiotic systems maintaining hind-gut microbiome integrity.

Feed Palatability Enhancers

Natural flavourants and appetisers that drive consistent dry matter intake.

OUR PROCESS

Customised From Farm to Performance

A rigorous 6-step framework that turns farm-level data into measurable dairy outcomes.

01

Farm Audit

On-site evaluation of herd size, breed, existing feeding program, milk yield parameters, and health indicators.

02

Feed Analysis

Laboratory analysis of all feed ingredients for dry matter, energy, protein, mineral, and mycotoxin profiles.

03

Ration Optimisation

Precision balancing of the total mixed ration to close nutritional gaps and maximise rumen efficiency.

04

Custom Formulation

Bespoke product blend engineered around the specific farm's deficiencies, targets, and economics.

05

On-Field Validation

Supervised trial phase with regular health monitoring, body condition scoring, and production tracking.

06

Performance Tracking

Ongoing data collection and quarterly reviews to quantify ROI and fine-tune the programme.

RESEARCH & INNOVATION

Where Science Meets the Field

Our R&D philosophy: every hypothesis tested in the lab, validated on the farm.

**Thermostable Technologies**

Proprietary micro-encapsulation systems that preserve bioactivity through India's extreme heat, humidity, and storage variability.

**Rumen Protection Systems**

Polymer and lipid-matrix technologies that ensure precise bypass delivery of amino acids, fatty acids, and vitamins to the small intestine.

**Precision Nutrition**

Data-driven formulation that eliminates guesswork — every gram of additive is calculated for a specific physiological outcome.

**Indian Field Validation**

All products are field-trialled under authentic Indian conditions — tropical climate, diverse breeds, and regional feeding systems.

100%

Field-Validated Under Indian Conditions

Every Shibha product has been trialled across diverse farm types, geographies, and seasons in India — ensuring you get science that actually delivers in your milking parlour.

WHY SHIBHA

The Shibha Difference

A partner built on science, validated on farms, and committed to your profitability.

Deep Ruminant Physiology Knowledge

Our team's expertise goes beyond feed formulation — we understand rumen fermentation, liver metabolism, and endocrine responses at the cellular level.

Indian Climate Adaptation

Solutions formulated for tropical stress, monsoon feed variability, and the unique nutritional challenges of Indian breed genetics.

Economic Performance Focus

Every recommendation is evaluated through an economic lens — milk income, health costs, and feed efficiency are always part of the equation.

Technical Field Support

Our nutritionists are partners, not just salespeople. Ongoing farm visits, data reviews, and programme adjustments are part of every engagement.

TRUSTED BY LARGE DAIRY OPERATIONS ACROSS INDIA

Tamil Nadu

Karnataka

Maharashtra

Gujarat

Punjab

Rajasthan

OUR VISION

"To become a trusted innovation partner in dairy nutrition — transforming science into sustainable productivity for every Indian farmer."

From small co-operative herds to large commercial operations — we are committed to making precision dairy nutrition accessible and impactful across every agro-climatic zone in India.
